

DATA SHEET

QSFP28-SR4-C-GEN

100G QSFP28 SR4 Optical Transceiver

QSFP28-SR4-C-GEN Overview

QSFP28-SR4-C-GEN QSFP28 SR4 optical transceivers are based on 100G Ethernet IEEE 802.3bm standard. QSFP28 SR4 offers 4 independent transmit and receive channels, each capable of 25G for an aggregate bandwidth of 100G.

Product Features

- Hot-pluggable QSFP28 package
- 4x25Gbps 850nm VCSEL laser
- Up to 103.1Gbps
- QSFP28 MSA compliant
- Up to 70m on OM3 Multimode Fiber and 100m on OM4 Multimode Fiber
- Single 1X12 MPO receptacle
- RoHS-6 Compliant
- Operating temperature range: 0°C to 70°C (case temperature)

Applications

• 100GBASE-SR4 100G Ethernet

1

Ordering Information

| Part Number | Produce ID | Description | Color on Clasp |
|----------------------|---------------|--|-------------------|
| QSFP28-SR4-C- GEN | M321803 | 100G QSFP28 850nm MPO Connectors, Up to 70m(OM3) or 100m(OM4) on MMF | beige |

General Specifications

| Parameter | Symbol | Min | Тур | Max | Unit | Remarks |
|-----------------------|------------------|------|-----|------|------|---------|
| Operating Temperature | Tc | 0 | | 70 | °C | 1 |
| Storage Temperature | T _{STO} | -40 | | 85 | °C | 2 |
| Input Voltage | Vcc | 3.14 | 3.3 | 3.46 | V | |
| Maximum Voltage | V _{MAX} | -0.5 | | 4 | V | 3 |

Notes:

- 1.Case temperature
- 2. Ambient temperature
- 3. For electrical power interface

Optical – Characteristics – Transmitter

| Parameter | Symbol | Min | Тур | Max | Unit | Remarks |
|--|-------------------------------|-------|-----------------|------|------|---------|
| Signal rate(per lane) | | 25.78 | 25.78125±100ppm | | Gbps | 1 |
| Optical Center Wavelength | λς | 840 | 850 | 860 | nm | |
| Spectral Width(RMS) | Δλ | | | 0.60 | nm | |
| Average Launch optical Power (per lane) | P _{TX} | -8.4 | | 2.4 | dBm | |
| Optical Modulation Amplitude(per lane) | OMA | -6.4 | | 3 | dBm | |
| Extinction Ratio | ER | 2 | | | dB | |
| Transmit optical power and TDEC difference | P-TDEC | -7.3 | | | dBm | |
| Transmitter dispersion eye diagram closure | TDEC | | | 4.3 | dBm | |
| Launch Power of OFF Transmitter | P _{OUT_OFF} | | | -30 | dBm | |
| Transmitter Eye Mask{X1,X2,X3,Y1,Y2,Y3} | {0.3,0.38,0.45,0.35,0.41,0.5} | | | | | 2 |

Notes:

1.The module consists of 4 channels, and the data is the rate of per lane. 2.Hit Ratio $1.5 \text{x} 10^{-3}$ hits/sample

Optical – Characteristics – Receiver

| Parameter | Symbol | Min | Тур | Max | Unit | Remarks |
|---|--------------------|-------|---------|------|------|---------|
| Signal rate(per lane) | | 25.78 | 3125±10 | 0ppm | Gbps | 1 |
| Optical Center Wavelength | λс | 840 | | 860 | nm | |
| Average received optical power (per lane) | P _{RX} | -10.3 | | 2.4 | dBm | |
| Receive damage optical power input value | Р | 3.4 | | | dBm | |
| Receiver Sensitivity (per lane) | R _{X_SEN} | | | -5.2 | dBm | |
| Receiver Reflectance | TR _{RX} | | | -12 | dB | |
| LOS Assert | LOSA | -30 | | | dBm | |
| LOS De-Assert | LOSD | | | -13 | dBm | |
| LOS Hysteresis | LOSH | 0.5 | 2 | | dB | |

Notes:

1. The module consists of 4 channels, and the data is the rate of per lane.

General characteristics of the module

| Parameter | Symbol | Min | Тур | Max | Unit | Remarks |
|---|--------|-----|-----|---------------------|------|---------|
| Data rate | BR | | | 103.1 | Gb/s | 1 |
| Bit error rate (no FEC forward error correction code) | BER | | | 5x10 ⁻⁵ | | 2 |
| Bit error rate (with FEC forward error correction code) | BER | | | 1x10 ⁻¹² | | 3 |
| Maximum transmission distance | | | | | | |
| OM3 multimode fiber | Lmax1 | | | 70 | М | 3 |
| OM4 multimode fiber | Lmax2 | | | 100 | М | 3 |

Notes:

- 1. Support 100GBASE-SR4, IEEE803.3bm.
- 2. Tested using the pseudo-random code PBRS31.
- 3. Need to use forward error correction code FEC.

Electrical – Characteristics – Transmitter

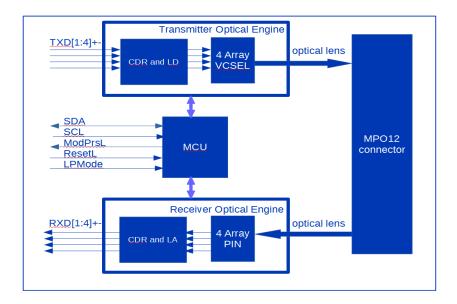

| Parameter | Symbol | Min | Тур | Max | Unit | Remarks |
|-------------------------------|--------------------|-----------------|----------|----------------------|------|---------|
| Data Rate Per lane | DR | | 25.78125 | | Gb/s | |
| Differential data input swing | V _{IN_PP} | 180 | | 1200 | mV | |
| Transmit disable voltage | V _D | Vcc-1.3 | | V _{cc} | V | |
| Transmit enable voltage | V _{EN} | V _{EE} | | V _{EE} +0.8 | V | |

Electrical – Characteristics – Receiver

| Parameter | Symbol | Min | Тур | Max | Unit | Remarks |
|--------------------------------------|--------------------------------|-------|----------|-----|------|---------|
| Data Rate Per lane | DR | | 25.78125 | | Gb/s | |
| Differential Data Output Swing | V _{OUT_PP} | 400 | 600 | 800 | mV | |
| Single Ended Voltage Tolerance | V | -0.35 | | 3.3 | V | |
| Data Output Rise/Fall Time (20%-80%) | t _r /t _f | 12 | | | ps | |

Block-Diagram-of-Transceiver

Functions Description

QSFP28-SR4-C-GEN module is manufactured using the advanced COB (Chip on Board) process. It consists of a microcontroller, a transmitter optical engine and a receiver optical engine. The module has built-in clock and data recovery functions. The default 4 channels are fixed at 25.78Gbps rate range. Modify the settings. The module can also work in the 28Gbps range and support OTN services. If you need other speed range versions or dual rate range versions, you can contact us for special customization.

The transmitter optical engine includes a 4-channel transmitter clock data recovery (CDR) and laser driver circuit (LD), a 4-channel VCSEL laser array, and a 4-channel detection photodiode (MPD) array. The high-speed differential electrical signal output by the host is sent to the laser driver for amplification by CDR recovery shaping, driving the VCSEL laser to generate an optical signal, and the optical signal is coupled to the optical fiber through the optical lens. The light engine integrates a photodiode for detection for output optical power detection, and the laser driver uses an automatic optical power control loop to ensure the stability of the transmitted optical power.

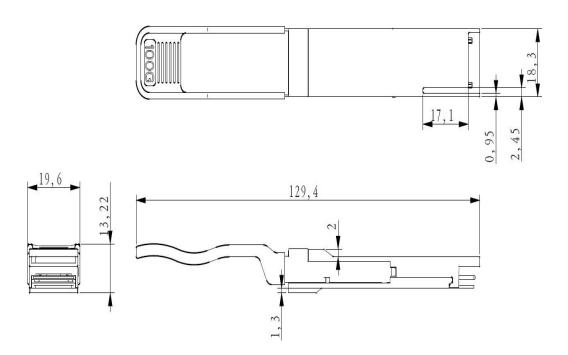

The receiver optical engine includes a 4-channel photodiode (PIN) array, a 4-channel signal amplifier (TIA/LA) and a receiver-side clock data recovery circuit (CDR) array. The optical signal in the fiber is coupled to a receiving photodiode (PIN) through an optical lens to convert it into a photocurrent. The photo-generated current signal is amplified by the amplifier, sent to the CDR circuit and recovered from the clock and data signals, and finally output to the host as a high-speed differential signal.

The microcontroller communicates with the host via a 2-wire serial communication interface, providing module control, status reporting and monitoring (DOM). This product complies with the SFF-8636 standard.

This product complies with the requirements of the IEEE 802.3bm standard. With the support of RS-FEC, it can reach a transmission distance of 100 meters in OM4 fiber.

Pin Assignment

| PIN# | Symbol | Description | Remarks |
|------|------------------|--|---------|
| 1 | GND | Ground | 5 |
| 2 | Tx2n | Transmitter Inverted Data Input, LAN2 | |
| 3 | Tx2p | Transmitter Non-Inverted Data Input, LAN2 | |
| 4 | GND | Ground | 5 |
| 5 | Tx4n | Transmitter Inverted Data Input, LAN4 | |
| 6 | Tx4p | Transmitter Non-Inverted Data Input, LAN4 | |
| 7 | GND | Ground | 5 |
| 8 | ModSelL | Module select pin, the module responds to two-wire serial communication when low level | 1 |
| 9 | ResetL | Module Reset | 2 |
| 10 | $V_{cc}R_X$ | +3.3V Power Supply Receiver | |
| 11 | SCL | 2-wire serial interface clock | |
| 12 | SDA | 2-wire serial interface data | |
| 13 | GND | Ground | 5 |
| 14 | Rx3p | Receiver Non-Inverted Data Output, LAN3 | |
| 15 | Rx3n | Receiver Inverted Data Output, LAN3 | |
| 16 | GND | Ground | 5 |
| 17 | Rx1p | Receiver Non-Inverted Data Output, LAN1 | |
| 18 | Rx1n | Receiver Inverted Data Output, LAN1 | |
| 19 | GND | Ground | 5 |
| 20 | GND | Ground | 5 |
| 21 | Rx2n | Receiver Inverted Data Output, LAN2 | |
| 22 | Rx2p | Receiver Non-Inverted Data Output, LAN2 | |
| 23 | GND | Ground | 5 |
| 24 | Rx4n | Receiver Inverted Data Output, LAN4 | |
| 25 | Rx4p | Receiver Non-Inverted Data Output, LAN4 | |
| 26 | GND | Ground | 5 |
| 27 | ModPrsL | The module is inserted into the indicate pin and grounded in the module. | 3 |
| 28 | IntL | Interrupt | 4 |
| 29 | $V_{cc}T_X$ | +3.3V Power Supply transmitter | |
| 30 | V _{cc1} | +3.3V Power Supply | |
| 31 | LPMode | Low Power Mode | 5 |
| 32 | GND | Ground | 5 |

| 33 | Tx3p | Transmitter Non-Inverted Data Input, LAN3 | |
|----|------|---|---|
| 34 | Tx3n | Transmitter Inverted Data Input, LAN3 | |
| 35 | GND | Ground | 5 |
| 36 | Tx1p | Transmitter Non-Inverted Data Input, LAN1 | |
| 37 | Tx1n | Transmitter Inverted Data Input, LAN1 | |
| 38 | GND | Ground | 5 |

Notes:

- 1. ModSelL is the input pin. The module responds to 2-wire serial communication commands when it is held low by the host. ModSelL allows multiple QSFP modules to be used on a single 2-wire interface bus. If ModSelL is High, the module will not respond to any 2-wire interface communication from the host. ModSelL has internal pull-up resistors in the module
- 2. The module restart pin, when the low level on the ResetL pin lasts longer than the minimum pulse length, resets the module and restores all user modules to their default state. When performing reset device, the host should ignore all status bits. Until the module reset interrupt is completed, please note that during hot plugging, the module will issue this information to complete the reset interrupt without resetting
- 3. This pin is active high, indicating that the module is running under a low power module.
- 4. IntL is the output pin, which is the open collector output and must be pulled up to Vcc on the motherboard. When it is low, it indicates that the module may malfunction. The host uses a 2-wire serial interface to identify the interrupt source
- 5. Circuit ground is internally isolated from chassis ground.
